(54) DATA CONVERTING DEVICE

COPYRIGHT: (C)1994, JPO&Japio

(57) Abstract

PURPOSE: To confirm the converting contents of a data converting device on a display screen by converting the input text data and producing the conversion data for conversion of an input file into an output file.

CONSTITUTION: The input description contents are read out of an input file 11 and a parameter is detected. Then an input deciding function part 21 checks the detected parameter based on the data converted for decision of the input description contents. If the checking result is correct, the parameter is stored in a data converting device. In the same way, an output converting function part 22 receives the data consisting of the text data and including a desired irregular rule from an irregular rule definition file 24. Based on this data, the data converting data is produced for conversion of the file 11 into an output file 18. Then the output description is carried out based on the data converting data and the parameter detected out of the description contents. Thus the file 18 is produced.
